BUILD NEW FOOD COMBINE,
ELECTRIC PORCELAIN FACTORY

COMBINE TO MAKE STARCH -- Rad, No 80, 4 Apr 50

Zrenjanin, 3 April -- A large starch and glucose factory is being built in Zrenjanin. Together with the sugar factory and other auxiliary buildings and warehouses, it will form a large food-industry combine. The factory will make starch out of corn (which has thus far been exported), and utilize it in the paper and leather industry. By further processing starch, glucose will be obtained. With the processing of 72,000 tons of corn per year, about 8 million dinars will be saved in foreign exchange.

Over 72 million dinars' worth of livestock fodder and various oils will be recovered yearly from the corn kernels. A standard-gauge railroad track is being constructed, which will pass through the sugar and starch factories, pass near the sugar warehouse, and emerge at the "Zrenjanin-Fabrika" (Zrenjanin factory) Railroad station.

Thus far, 40 percent of the necessary standard-gauge track has been laid, and 40 percent of the starch factory has been constructed. A 10,000-kilowatt power plant with four turbines is scheduled to be completed in the near future. The amount of starch produced by the combine will save Yugoslavia about 144 million dinars in foreign exchange per year.

TO MAKE 6,500 TONS OF PORCELAIN YEARLY -- Rad, No 80, 4 Apr 50

Kragujevac, 3 April -- Construction of a large electric porcelain factory is scheduled to be completed at the end of this year. The factory is expected to produce 6,500 tons of porcelain per year, including 3,000 tons of low- and high-tension equipment and 500 tons of pressed porcelain. Rich deposits of kaolin are located in the vicinity of the factory. The rooms of the factory will be constructed of prefabricated parts.
